Base for dermal use - contains soluble collagen (deriv.) magnetic powder and/or far IR emitting powder and opt. drugs

Base for dermal use which contains soluble collagen and/or its deriv., and magnetic powder and/or far IR irradiating powder. The base pref. also contains drugs.

USE/ADVANTAGE - The base contains a soluble collagen and/or deriv. which is vitally affinitive polymer, to protect against various skin disorders e.g. dermal inflammation and roughness, even for allergic predisposition person can be used safely. Furthermore, repair acceleration, skin aging prevention, fair complexion effects can be expected. Blood circulation, recovery of fatigue analgesic and antiinflammatory effects due to dispersed magnetic powder in base, and/or vasodilation, acceleration of blood circulation, metabolic acceleration, etc. due to far IR irradiation, are obtd. The base can also contain optional drugs, these can permeate into epidermis enoughly, by aid of effects of magnetic powder and/or far IR irradiation powder, and drug effect can be expected enoughly.

Réf. 90-257584 [34]

Thus the base can be applied as optional preps. and can be adhered to needed positions, and removal by washing is also easy.

In an example, a base contained soluble collagen 0.5 part, magnetic powder 30 parts, propylene glycol 5 parts, purified H₂O 74.5 parts. Total 100 parts. (9pp)

Cosmetic material which can be prepd. at time of use - comprises first agent of collagen sponge and second agent comprising conditioning soln.

The material comprises a first agent comprising a collagen sponge and a second agent comprising a conditioning soln. A Hydrogen bond cutting agent is added to the first agent and/ or the second agent, and, if necessary, one or more of excipients, breaking agents, cosmetic material compounding agents and dispersing agents are added to the first agent.

USE - The dispersibility of the collagen sponge is increased. The material can be used immediately after mixing. (4pp)

Foam type anhydrous cosmetic material - contg. base soln., silicon gum, starch and/or lipophilic cane sugar fatty acid ester, metal soap, volatile solvent and spraying agent

The material contains (A) 80-85 pts.wt. of base soln. contg. (a) 1-20 wt.% of silicone gum; (b) 0.3wt.% or more and less than 20 wt.% of starch fatty acid ester and/or lipophilic cane sugar fatty acid ester; (c) 0.1wt.% or more and less than 15wt.% of metal soap; and (d) 80-95wt.% of volatile solvent, and (B) 15-40pts.wt. of spraying agent.

USE - The material forms a good foam and is easily applied to skin and hair. It forms a film having water proof property when applied and offers good sweat and water proof properties. The effect is kept for long time. (6pp)
